Supply of medical surgical tools

No. 116

【Consultation】

We mainly produce and sell implants and screws for osteosynthesis.

We received an order for medical drills and taps but we have never worked on manufacturing these type of products.

I searched a website of a medical exhibition and found that YAMAWA manufactures medical drills, reamers, taps, etc. Can you supply us with these types of items?

【Answer】

We do manufacture and supply surgical tools such as medical drills and taps.

However, at this time we are only accepting orders of the tools as OEM medical parts.

This means that you're responsible for obtaining the official approval of "Manufacturing and sales business license" in you country in order for you to sell the tools as medical surgical tools.

Please understand the above point in advance.

【Advice】

YAMAWA possesses a "Medical Device Manufacturing Industry Registration Certificate" and manufactures medical surgical tools, but we do not possess a "Manufacturing and sales business license".

Also, we do not manufacture medical surgical tools as a medical device manufacturer.

Therefore, in order to sell medical surgical tools in the market, you are required to obtain "Manufacturing and sales business license" on your own in your country.

For your reference, I would like to show some medical surgical tools YAMAWA has manufactured in the past.

YAMAWA manufactures excellent cylindrical dental surgical tools and surgical tools used in orthopedic surgery.

In many cases, size and dimensions of the shanks and drive end of the tool and other parts differ depend on the method they are used in as well as the instructions given by medical staff.

With this in mind, please supply us with the required dimensions by a drawing upon your RFQ.

【Dental surgery tools】

【Medium-sized surgical tools】

【Large seized surgical tools】
