

About your order for surgical tools for orthopedics

No.117

【Consultaion】

We are a trading company who supplies medical products to hospitals. Recently we received an order for a "special drill" from an orthopedic hospital to be used by their surgical team.

We would like to purchase the drills from a domestic supplier because the quantity is very small which makes it difficult to acquire from overseas. We know that YAMAWA produces medical surgical tools from your website and would like to how to place an order.

【Answer】

YAMAWA produces surgical tools for fracture surgery and cruciate ligament surgery' use, but we do not have a "Manufacturing and sales business license" for these tools. Therefore, we specialize in "OEM" business for surgical tools as medical parts. This is the reason why we cannot supply the surgical tools directly to a trading company. Please contact any company who produces and supplies medical devices in your country, and check if they can supply you the special drills or import from YAMAWA for you.

If you can provide us the drawing of the special drills, we will check whether we can produce it or not in advance.
